NEBRASKA
DEPARTMENT OF HEALTH

1987 VITAL STATISTICS REPORT

KAY A. ORR
GOVERNOR

Gregg F. Wright, M.D., M.Ed.
Director of Health

John Sahs, Director
Bureau of Health Planning and Data Management

Stanley S. Cooper, M.S., Ph.D.
Director, Bureau of Vital Statistics

Report Prepared by:

Division of Health Data Systems

FOREWORD

Nebraska statute requires that records of birth, death, fetal death, marriage, and divorce be filed with the Bureau of Vital Statistics of the Department of Health. Approximately 60,000 records of vital events occurring in Nebraska are filed annually, and are added to the nearly five million such records already on file. Over 100,000 certified copies from those records are issued each year.

Responsibility for filing certificates of birth lies with the individual in attendance at birth, usually a physician. Funeral directors are responsible for filing certificates of death and of fetal death when burial takes place. Hospitals are to file fetal death certificates when hospital disposal is performed. County judges and district court clerks are, respectively, responsible for filing records of marriage and divorce.

The excellent cooperation of all the individuals mentioned is appreciated, and permits development of the tabulations presented in this report. Providing useful data stands as the goal of this report, and any questions or comments regarding the report, or requests for more detailed information, should be directed to:

Introduction 1

Definitions of Terms 2-4

Births, deaths, marriages and divorces by number and rate, 1925-1987. 5

Graph, births and deaths by rate, 1925-1987. 6

Population of Counties, 1940-1987. 7-8

Vital Statistics Summary, 1987 9-10

BIRTH SECTION

Birth Highlights 11-13

Map, number of births, each county by residence, 1987. 14

Births by place of occurrence and by usual residence of mother, 1985-1987, rate for 1987 15-18

Births, sex, race, and plurality by place of residence, 1987 . . 19-22

Births by age group of mother, percent, 1983-1987. 23

Average age of mother by birth order, 1970-1987. 23

Chart, number of children by age of mother, 1987 24

Teen births by place of residence, number and percent of total births, 1987 and 1983-1987 25-26

Prenatal care by number of visits, age of mother, education of mother, birth weight and race of child. 27-28

Graph, low and very low birth weight by percent of total births, 1970-1987. 29

Births by weight, 1987 30

Births, very low and low birth weight by place of residence, number and rate, 1987 and 1983-1987. 31-32

Graph, out-of-wedlock birth rates, 1960-1987 33

Births, out-of-wedlock by place of residence, number and rate, 1987 and 1983-1987 34-36

Children born out-of-wedlock by age of mother, number and rate, 1983-1987. 37

TABLE OF CONTENTS

Page

Children born out-of-wedlock by age and race of mother, number and rate, 1987. 37

Births, percent of race out-of-wedlock, 1975-1987. 38

Births, percent of age group out-of-wedlock, 1983-1987 38

Births, out-of-wedlock, number of children by age of mother, 1987 39

Birth defects by type of defect, number and rate, 1987 and 1983-1987. 40-41

Birth defects by county, number of cases, and percent of total births, 1987 and 1983-1987 42-43

Birth defects by month of birth, age of mother, birth weight, sex and race, 1987 44

DEATH SECTION

Death Highlights 45-46

Deaths by place of occurrence and by usual residence of deceased, 1985-1987, rate for 1987 47-50

Average age at time of death, male and female, 1987. 50

Deaths, sex and race by place of residence, 1987 51-54

Graph, average age at time of death, 1925-1987 55

Graph, average age at time of death, male and female, 1960-1987. 56

Principal and other causes of death, 1983-1987 57

Principal and other causes of death, crude rates, 1983-1987. . 58

Principal and other causes of death, age-adjusted rates, 1983-1987. 59

Cancer deaths by site and sex, 1983-1987 60

Cancer deaths by site and sex, age-adjusted rates, 1983-1987 . 60

Graph, deaths, ten leading causes by number, 1987. 61

Graphs, leading causes of death by selected age groups and sex, 1987: 62-67
- all ages. 62
- ages, 1-14. 63
- ages, 15-29 64
- ages, 30-44 65
- ages, 45-59 66
- ages, 60 and over 67

TABLE OF CONTENTS

Page

Deaths, ten leading causes by place of residence, number, crude and age-adjusted rates, 1987 and 1983-1987: 68-97
- heart disease 68-70
- cancer 71-73
- cerebrovascular disease 74-76
- accidents 77-79
- pneumonia 80-82
- chronic lung disease 83-85
- diabetes mellitus 86-88
- atherosclerosis 89-91
- suicide 92-94
- nephritis and nephrosis 95-97

Accidental deaths by cause, 1983-1987 98

Graph, leading causes of accidental deaths, 1987 99

Principal and other causes of accidental deaths by place of residence, 1987 100-103

Accidental deaths occurring in Nebraska by type of accident and age group, 1987 104

Drownings by site, sex and age group, 1987 105

Farm fatalities by type, sex and age group, 1987 105

Graph, suicide mortality by crude rate, 1918-1987 106

Suicide by type, sex and age group, 1987 107

Graph, neonatal and infant deaths, 1925-1987 108

Infant and neonatal deaths by place of residence, number and rate, 1987 and 1983-1987 109-111

Deaths under one year of age by cause, sex, race and birth weight, 1987 112

Perinatal and fetal deaths by place of residence, number and rate/ratio, 1987 and 1983-1987 113-115

Fetal deaths by cause of death, 1987 116

Fetal deaths by month, age group of mother, sex, race and place of delivery, 1987 117

MARRIAGE AND DIVORCE SECTION

Marriage and Divorce Highlights 118-120

Graph, marriages and divorces by rate, 1925-1987 121

Marriages by county, number and rate, 1984-1987 122-123

Residents married by county, rate, 1987 124

TABLE OF CONTENTS

Page

Marriages by race, bride and groom, 1987 125

Number of marriages, bride and groom, 1987 125

Previous marital status, bride and groom, 1987 125

Number of marriages by age of bride and groom, 1987. 126

Chart, marriages by age of bride and groom, 1987 127

Chart, first marriages by age of bride and groom, 1987 128

Divorces by county, number and rate, 1984-1987 129-130

Chart, divorces by age of husband and wife, 1987 131

Divorces by duration of marriage, number and percent, 1985-1987. 132

Divorces by race, husband and wife, 1987 133

Divorces, number of children affected, 1987. 133

Divorces, number of marriages, husband and wife, 1987. 134

Divorces, type of settlement made, 1987. 134

INTRODUCTION

The information presented in this report is drawn from the vital records of the State of Nebraska. Records of events which occur in other states for Nebraska residents received through an Interstate Exchange Agreement are also utilized. The primary period covered is calendar year 1987, but selected data from previous years are also included. Data from 1987 records received after September 1, 1988 by the Bureau of Vital Statistics are not included in the tabulations in this report. However, the number of such records is minimal and their statistical effect negligible.

The birth defect data presented in the report are taken from the Nebraska Birth Defects Registry, with the exception of the death data. Information for the Registry is provided by reporting personnel in approximately 100 Nebraska hospitals.

The state and county population figures used in the calculation of rates are 1987 estimates provided by the United States Bureau of Census. City and balance of county populations used are Health Department estimates. U.S. vital event data, presented for comparative purposes, are provisional and are from the National Center for Health Statistics.

Characteristics of the population, such as its size and its age structure, can bear a great influence on vital statistics data. Only 30 counties and 12 cities in Nebraska had populations over 10,000 at the 1980 Census. Nine counties had less than 1,000 residents. In any area with a population under 10,000, wide variations in numbers or rates of events can appear from year to year, and no single year may be truly representative of the population. Counties with a high proportion of young people will show relatively higher crude birth rates and lower crude death rates than counties with greater numbers of older residents.

Information for towns having populations of 2,500 or more are included in this report, but information is available for towns where populations are 1,000 or more persons.

DEFINITIONS OF TERMS

GEOGRAPHIC ALLOCATION

RESIDENCE DATA - A person's usual place of abode. This means, in general, the place where one lives and sleeps most of the time. However, when usual residence is in a nursing home or other institution, residence is considered the place where the person lived prior to admission to the institution.

OCCURRENCE - The location in which an event takes place irrespective of the usual residence of persons involved.

BIRTHS

BIRTH WEIGHT - The first weight of the fetus or newborn obtained after birth. This weight should be measured preferably within the first hour of life before significant postnatal weight lost has occurred.

LOW BIRTH WEIGHT - A birth weight under 2500 grams or 5 pounds, 9 ounces.

VERY LOW BIRTH WEIGHT - A birth weight under 1500 grams or 3 pounds, 5 ounces.

LENGTH OF PREGNANCY - The duration of gestation, in completed weeks, as calculated from the first day of the last normal menses to the date of birth.

LIVE BIRTH - The complete expulsion or extraction of a product of conception from its mother, irrespective of the period of gestation, which, after such separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached and is reportable.

LIVE BIRTH ORDER - The number of live born children including the current birth.

DEATHS

CAUSE OF DEATH - Deaths, by cause, are classified according to the International Classification of Diseases, Ninth Revision, of the World Health Organization.

FETAL DEATH - Death prior to the complete expulsion or extraction of a product of conception from its mother, irrespective of the duration of pregnancy. Until the pregnancy has reached 20 weeks duration, it is not required that such a death be reported.

INFANT DEATH - Death of a person under one year of age.

NEONATAL DEATH - Death of a person under 28 days of age.

DEFINITIONS OF TERMS

DEATHS

PERINATAL DEATH - Fetal deaths plus neonatal deaths.

MATERNAL DEATH - Deaths attributable to delivery or the complications of pregnancy, childbirth or the puerperium.

DEFINITIONS AND FORMULAS OF RATES AND RATIOS

CRUDE BIRTH RATE = The number of live births per 1,000 population.

$$\frac{\text{Number of Live Births}}{\text{Population of Area}} \times 1{,}000$$

FERTILITY RATE = The number of live births per 1,000 females 15-44 years of age.

$$\frac{\text{Number of Live Births}}{\text{Female Population (ages 15-44)}} \times 1{,}000$$

OUT-OF-WEDLOCK BIRTH RATE = The number of out-of-wedlock births per 1,000 live births.

$$\frac{\text{Number of Out-of-Wedlock Live Births}}{\text{Number of Live Births}} \times 1{,}000$$

SEX RATIO = The number of male births for each 1,000 female births.

$$\frac{\text{Number of Male Live Births}}{\text{Number of Female Live Births}} \times 1{,}000$$

CRUDE DEATH RATE = The number of deaths per 1,000 population.

$$\frac{\text{Number of Deaths}}{\text{Population of Area}} \times 1{,}000$$

FETAL DEATH RATIO = The number of fetal deaths per 1,000 live births.

$$\frac{\text{Number of Fetal Deaths}}{\text{Number of Live Births}} \times 1{,}000$$

INFANT DEATH RATE = The number of infant deaths per 1,000 live births.

$$\frac{\text{Number of Infant Deaths}}{\text{Number of Live Births}} \times 1{,}000$$

NEONATAL DEATH RATE = The number of neonatal deaths per 1,000 live births.

$$\frac{\text{Number of Neonatal Deaths}}{\text{Number of Live Births}} \times 1{,}000$$

DEFINITIONS OF TERMS

DEATHS

PERINATAL DEATH RATE = The number of perinatal deaths per 1,000 live births plus fetal deaths.

$$\frac{\text{Number of Perinatal Deaths}}{\text{Number of Live Births + Number of Fetal Deaths}} \times 1{,}000$$

MATERNAL DEATH RATE = The number of maternal deaths per 100,000 live births.

$$\frac{\text{Number of Maternal Deaths}}{\text{Number of Live Births}} \times 100{,}000$$

AGE-SPECIFIC DEATH RATE = Number of deaths in a specific age group per 100,000 population in the specific age group.

$$\frac{\text{Number of Deaths in Age Group}}{\text{Population in Age Group}} \times 100{,}000$$

AGE-ADJUSTED DEATH RATE = A weighted averaging of a crude death rate according to a standard age distribution. An age-adjusted death rate represents what the crude death rate would be if the population for which the rate is adjusted and the standard population had the same age distribution. This procedure allows for the comparison of death rates among populations having different age distributions. The death rates in this report have been adjusted according to the age distribution of the United States population in 1970.

$$\text{The sum of } \frac{\text{Age-Specific Death Rates, for Each Age Group} \times \text{Standard Population in each Age Group}}{\text{Total Standard Population}}$$

CAUSE-SPECIFIC DEATH RATE = The number of deaths from a specific cause per 100,000 population.

$$\frac{\text{Number of Deaths for a Specific Cause}}{\text{Population of Area}} \times 100{,}000$$

BIRTH HIGHLIGHTS

In 1987, the number of resident live births in Nebraska and the state's birth rate both declined for the seventh consecutive year. A total of 23,818 live births were recorded among Nebraska women in 1987, which translates into a birth rate of 14.9 per 1,000 population. This figure represents the lowest birth rate recorded in Nebraska since 1973, and the second lowest since 1925. Moreover, the declining birth rate in Nebraska contrasts somewhat with recent trends observed in the rest of the United States. Nationally, the birth rate has held steady in recent years (15.9 in 1980 vs. 15.7 in 1987), while Nebraska's birth rate has continued to drop during the same period (from 17.4 in 1980). These diverging patterns are also reflected in Nebraska and U.S. fertility rates (the number of live births per women of childbearing age); fertility rates in Nebraska fell from 77.3 (per 1,000 women 15-44 years of age) in 1980 to 65.2 in 1987, while U.S. rates declined less severely, from 69.2 in 1980 to 66.1 in 1987.

Birth rates throughout Nebraska in 1987 differed considerably from place to place. Thurston County recorded the highest birth rate of any county (26.7 per 1,000 population), while Hooker County recorded the lowest (7.0). Among Nebraska communities with more than 2500 residents, Scottsbluff recorded the highest birth rate in 1987 (18.9), while Ord had the lowest (5.9).

In addition to declining birth and fertility rates, another trend of interest in Nebraska is the steadily increasing age of women giving birth. Nebraska birth data show that the average age of the mother at the birth of her first, second, and third child has increased considerably during the past two decades. In addition, the most recent five years' worth of Nebraska birth data (1983-1987) show that women 25 years of age and older have increased their share of the total number of births in Nebraska (from 53.2% in 1980 to 63.0% in 1987), while the share of births among women under 25 years of age has diminished. The declining number of births to teenaged mothers has contributed substantially to this shift; in 1987, Nebraska recorded 2,118 births among teenaged mothers, the lowest figure of the 1980s and a drop of over one-third from the 3,312 teen births recorded in Nebraska in 1980.

One trend in Nebraska childbearing that appears to have stopped is the declining frequency of high order births. High order births are defined as births to women who have already borne four or more children. In 1970, 10.3% of all Nebraska live births were high order births. This figure declined to 3.7% by 1980, but has remained almost constant since; in 1987, 3.6% of the state's live births were high order births.

Prenatal care began during the first trimester of pregnancy for 82.1% of all 1987 Nebraska live births, an increase from 81.2% in 1986. However, the percentage of all live births in which prenatal care began during the third trimester of pregnancy or not at all has held constant throughout the 1980s, with slightly less than 3% of all mothers not receiving care until the third trimester of pregnancy, and about 0.5% receiving no care at all.

Low weight births occurred at a rate of about 55.0 per 1,000 live births in Nebraska in 1987. This rate has remained fairly constant in Nebraska since the middle of the 1970s. The rate for very low weight births in Nebraska has held even steadier; the 1987 rate of 8.7 per 1,000 live births has changed little in the past two decades.

Out-of-wedlock births continue to claim a larger share of all live births in Nebraska. In 1987, 16.7% of all live births in Nebraska occurred out-of-wedlock. The out-of-wedlock birth rate in Nebraska has increased every year since 1974, and in fact has doubled in the 13 years from 1974 to 1987. Nebraska's 1987 birth data show that out-of-wedlock birth rates are highest among the youngest mothers, and gradually decrease as age increases. Out-of-wedlock birth rates in Nebraska are especially high among blacks (63.7% in 1987) and American Indians (60.2% in 1987), although rates are currently increasing faster among whites than any other racial group. Nebraska birth data for the past five years (1983-1987) show that increases in out-of-wedlock birth rates are not confined to mothers of any particular age, but have increased substantially at virtually every maternal age.

Birth defects were diagnosed among 597 babies born in Nebraska in 1987. This figure represents 2.5% of all 1987 births in the state. The birth defect incidence rate in Nebraska has been remarkably stable during the 1980s, ranging between 2.2% and 2.6%. In recent years, circulatory problems have been the most commonly diagnosed defect, comprising over one-quarter (28.0%) of all defects reported in 1987, and almost as many (24.5%) during the last five years (1983-1987).

DEATH HIGHLIGHTS

A total of 14,820 deaths occurred among Nebraska residents in 1987, which translates into a crude death rate of 9.3 per 1,000 population. The annual crude death rate in Nebraska has fluctuated little in the past decade, ranging between 9.0 and 9.4 since 1975.

In 1987, the average age at death in Nebraska rose to 73.4 years, the highest figure ever recorded in the state. For Nebraska males, the average age at death in 1987 exceeded 70 years for the first time ever, reaching 70.1 years. The average age at death for Nebraska females in 1987 was about seven years greater than that for males, and tied the all-time state record (set in 1985) of 76.9 years. The discrepancy between average age at death for males and females has existed in Nebraska and throughout the United States for many decades.

The leading cause of death in Nebraska was heart disease, which accounted for over one-third (37.2%) of the total number of resident deaths in 1987. As in the rest of the United States, heart disease has been the principal cause of death in Nebraska for several decades. In Nebraska, death data for the most recent five years (1983-1987) show the lowest age-adjusted heart disease mortality rate in Colfax County (154.1 deaths per 100,000 population) and the highest rate in Thomas County (403.3).

The second leading cause of death in Nebraska in 1987 was cancer, which accounted for about one-fifth (20.8%) of all resident deaths. Cancer has held its position as the second leading cause of death in both Nebraska and the United States for several decades, although it ranked first in Nebraska in 1987 as the cause of death among women 30-59 years of age. Mortality rates for specific sites show that lung cancer predominated among Nebraska males, followed by prostate and colon cancer. For Nebraska females, breast cancer was the most common site noted among resident deaths, followed by lung and colon. The most recent five years' worth of mortality data (1983-1987) show the highest age-adjusted cancer death rates in

Garfield County (228.1) and the lowest in Hayes County (47.1).

After heart disease and cancer, cerebrovascular disease, accidents, pneumonia, chronic lung disease, diabetes mellitus, atherosclerosis, suicide, and nephritis-nephrosis round out the ten most common causes of death in Nebraska in 1987. Like heart disease and cancer, these rankings vary considerably by age. As an example, accidents were only the fourth leading cause of death among all Nebraskans in 1987, but were the primary cause of death among Nebraskans 1-29 years of age and Nebraska males 30-44 years of age. Similarly, suicide ranked ninth as a cause of death in Nebraska in 1987, but was second among Nebraska males 15-29 years of age and third among Nebraska females 15-29 years of age and Nebraska males 30-44 years of age.

A total of 204 infant deaths and 111 neonatal deaths occurred in Nebraska in 1987. The rates based on these figures are 8.6 (per 1,000 live births) for infant deaths and 4.7 (per 1,000 live births) for neonatal deaths. Both of these rates are the lowest ever recorded in the State of Nebraska. In addition, Nebraska's 1987 infant mortality rate was again lower than the United States infant mortality rate (10.0), continuing a trend observed for many decades.

MARRIAGE AND DIVORCE HIGHLIGHTS

In 1987, the number of marriages and the marriage rate in Nebraska declined for the sixth consecutive year. The 11,808 marriages that occurred in Nebraska in 1987 represent the lowest number for any single year since 1964, and the marriage rate of 7.4 per 1,000 population is the lowest since 1959. Marriage rates in Nebraska have remained lower than U.S. rates in recent years, and have declined more sharply in Nebraska than in the rest of the United States. During the 1980s, Nebraska marriage rates fell by 18.7%, from 9.1 per 1,000 population in 1980, while U.S. rates dropped by only 6.7%, from 10.6 in 1980 to 9.9 in 1987.

The marriage rates presented in this report are based upon 1) the number of marriages occurring in each county of the state, and 2) the number of county residents married. The discrepancy in the rates determined by these two methods is due to the fact that the former are based on the number of marriages, while the latter are based on the number of persons getting married. In addition, rates based on the number of county residents married are incomplete, as Nebraskans married in states that do not exchange marriage records with Nebraska are not included in the rate calculations. The number of persons missed in this manner is probably no more than a few percent of the total number of Nebraskans married, however, and so should not invalidate these rates. In 1987, county-of-residence marriage rates in Nebraska ranged from a high of 21.0 per 1,000 population in Wheeler County to a low of 2.0 in Hooker County. By contrast, rates based on the number of marriages occurring in each county in 1987 ranged from 10.3 in Hall County to 0.0 in Hayes County.

The trend toward more interracial marriages among Nebraskans continued in 1987. The percentage of all Nebraska marriages which involved persons of different races rose to 3.4% in 1987, from 3.1% in 1986. The percentage of interracial marriages has been steadily increasing in Nebraska for the past two decades. In 1970, 1.3% of all Nebraska marriages were interracial; this figure rose to 2.5% in 1980, and has continued to rise into the 1980s.

Marriage data for 1987 also show that remarriages continue to claim a growing share of all Nebraska marriages. The percentage of marriages in Nebraska in 1987 which were the first for both bride and groom declined for the ninth consecutive year, falling to 58.1%. Conversely, the percentage of marriages which were the first for neither bride nor groom rose again in 1987, to 20.4%.

Age at marriage has been steadily increasing in recent years in Nebraska. In 1980, either the bride or groom was less than 20 years old in 23.9% of all Nebraska marriages, and both the bride and groom were at least 30 years of age in 14.7% of all Nebraska marriages. By 1987, these figures were almost completely reversed; only 12.0% of all Nebraska marriages involved either a bride or groom under 20, while 22.0% of all marriages involved both a bride and groom 30 or over. This pattern persists when limited to just first marriages. In 1980, over one-third (35.2%) of all first marriages in Nebraska involved either a bride or groom less than 20 years of age, but this figure fell to 19.2% in 1987.

A total of 6,189 divorces were granted in Nebraska in 1987, which translates into a divorce rate of 3.9 per 1,000 residents. The number of divorces and the divorce rate have remained remarkably constant in Nebraska for the past decade. With the exception of 1981, the number of divorces granted annually in Nebraska since 1977 has ranged between 6,000 and 6,400, and the state's divorce rate has ranged between 3.7 and 4.1 per 1,000 population. Recent Nebraska divorce rates remain lower than U.S. rates; nationally, the annual divorce rate has ranged between 4.8 and 5.3 per 1,000 population since 1980.

One of the more prominent trends in recent divorce statistics in Nebraska is the increasing number of divorces involving remarriages rather than first marriages. In 1987, 62.6% of Nebraska divorces ended first marriages for both husband and wife. This percentage was down from 63.1% in 1986 and 67.6% in 1980. Conversely, marriages other than the first for both partners were dissolved in 18.3% of Nebraska's 1987 divorces, up from 17.6% in 1986 and 15.2% in 1980.

As in previous years, Nebraska marriages ending in divorce were relatively short-lived. In 1987, slightly more than half (50.2%) of all divorces granted in Nebraska involved marriages of less than seven years duration. This figure has not changed appreciably during the 1980s.
